TECHNICAL ASSIGNMENT**technical requirements for the constructions for entertainment****1. The frame and base of the sports ground structures:**

1. External ribs - 18 mm (laminated birch plywood);
2. Internal ribs - 18 mm (laminated birch plywood), the area of internal ribs is not less than 80% of the external ones;
3. Places of increased loads:
 - External ribs - 36 mm (laminated birch plywood);
 - Internal ribs - 54 mm (laminated birch plywood).
4. Parts of the external and internal ribs in places of high load are connected by a "puzzle" system;
5. Connecting laths with a thickness of at least 60 mm x 90 mm;
6. The course of connecting laths should not be less than 300 mm;
7. Connecting laths should be fastened to internal and external ribs at least every 1250 mm with the use of 2 fastenings on the end face of a lath;
8. Fastening of a lath to the ribs should be carried out with screws like "TORX" not less than 120 mm long, diameter of a screw is 6 mm;
9. The base of a construction is established on substrates not less than 6 mm;
10. The base has a mandatory ventilation system (bottom, top);
11. The ends of the ribs (all sections) are treated with latex paint;
12. Access panel (rear walls) must be at least 12 mm thick;
13. Connecting laths in contact with water must be treated with latex paint;
14. Connecting laths should be treated with antiseptic by immersion in the bath.
15. The course of ribs of the base should not be less often than each 1250 mm;
16. The screws that secure the external ribs should be in the same plane together with the ribs.
17. All plywood and wooden structures must be installed on a plastic substrate with a thickness of at least 10 mm, and the substrate must have a density of at least 0.58 g / cm³.

2. Surface for riding of a construction for entertainment:

1. The total thickness of the surface for the riding of skatepark structures should not be less than 15 mm;
2. The surface for driving consists of a sheet of the laminated birch plywood of 9 mm and 6 mm, or composite material of 6 mm (IN THE PREMIUM OPTION), technical characteristics:
 - water resistance: absorption is not more than 3% (after 500 hours)
 - flexural strength -> 115 MPa (equal to or less)
 - tensile strength -> 90 MPa (equal to or less)

- elasticity: 13,000 MPa (equal to or less than)
 - density 1440 kg / m³ (equal to or greater than)
 - Rockwell hardness: 90 HRE (equal to or less than)
 - frost-resistant: yes
 - quick-drying: yes
 - combustible: no (class F1)
 - surface: smooth and lightly porous,
 - anti-slip.
 - shock-absorbing features: good;
3. The finishing surface (intended for contact with the wheels of the equipment) must be made of composite materials with a thickness of at least 6 mm;
 4. The surface for riding covers the base of the skatepark in a checkerboard pattern (that joints of the bottom layer did not coincide with joints of the top layer);
 5. 3,125 square meters of surface for riding are screwed to the connecting laths by at least 50 screws of "TORX" type;
 6. Screws that fasten the riding surface to the connecting laths must be of the "TORX" type, not less than 60 mm long, not less than 5 mm thick;
 7. All cuts, joints, end faces of a surface for riding are processed with a latex paint;
 8. Surfaces for riding should not protrude beyond the skatepark frame by more than 3 mm.
 9. The gaps between the sheets on the surface for riding should be no more than 3 mm;
 10. The screws that fasten the surface for riding to the skatepark frame must be in the same plane together with the surface for riding.

3. Metal components of the construction for entertainment

1. The metal parts should be at least 3 mm thick;
2. All structures for sliding that consist of a plywood-wooden frame should be framed with a metal corner;
3. The corner and strips must be made of 430 stainless steel, 3 mm thick;
4. The size of the corner for sliding should be at least 120 x 50 mm;
5. The corner in places for sliding should be above a surface for riding.
6. The strip from stainless steel that protects the edges of a surface for riding should not be narrower than 50 mm;
7. The stainless steel strip that protects the edges of the surface for riding must be in one plane together with the surface for riding;
8. Corner and strips should be fastened to the base using screws like "TORX" at least every 400 mm in two planes;
9. A fence shall be installed on the structures above 1200 mm;
10. The fence must be made of 340 stainless steel;
11. The fence must be in the same plane with the rib to which it is attached (protrude no more than 3 mm per edge)
12. Metal parts for sliding, which are separately located and installed on the structure, must be made of metal with a wall thickness of at least 3mm;
13. The diameter of separately located structures for sliding should not be less than 60 mm;
14. Metal parts for sliding, which are separately located and installed on the structure, must be painted using fluorescent paint;
15. Parts for entering and exiting from constructions should be made of stainless steel 430 and have a length not less than 400 mm;
16. Metal parts for entering and exiting must be attached to the frame of the skatepark with screws of the "TORX" type at least every 400 mm;
17. Screws fastening the exits and entrances must be at least 60 mm long and at least 6 mm thick;

Catalogue of products 2021

18. "Copings" are pipes that are on the structures of "Quarter pipe", and they must be made of 430 stainless steel;
19. "Coping" is attached to the frame with screws type "TORX", the length of the screw is not less than 130 mm, the thickness is not less than 60 mm;
20. Separately located metal structures must be attached to the floor using anchors or by concreting;
21. The fence of the skatepark is attached to the frame with screws at least 130 mm long and at least 10 mm thick;
22. Fence elements must be fastened every 1250 mm.
23. All fastening elements must be galvanized.

Internal ribs have an area of at least 80% of the external ones

Usage of puzzles to increase durability

Surface for riding 6 + 9 mm

Attention!
Specify and check the composition of the supplier's products

Surface for riding 15-18 mm

All metal elements are galvanized

Plywood with a total thickness of 40-45 mm is used in places of increased load

Connecting rail 90x60 mm is processed with antiseptic

Processing of the connecting rails with latex

Access panel 12 mm

"Dense" grid of connecting rails

The number of self-tapping screws per 1 square meter is not less than 14

Reinforced places for descent
